

# ABHIJITH PUNNAPPURATH

MaRS Discovery District, 101 College Street  
Toronto, Ontario M5G 1L7, Canada

Email: [jithuthatswho@gmail.com](mailto:jithuthatswho@gmail.com)  
Web page: [abhijithpunnappurath.github.io](https://abhijithpunnappurath.github.io)

## RESEARCH INTERESTS

**Broad Areas:** Computer vision and image processing.

**Specific Areas:** Face recognition, super-resolution, dynamic object segmentation, change detection, motion deblurring, reflection removal, white-balancing, image compression, raw reconstruction, deep learning.

## EDUCATION

**MS + PhD** (Dual degree)  
Image Processing & Computer Vision  
Indian Institute of Technology Madras  
Advised by Prof. A. N. Rajagopalan  
CGPA : 8.84

July 2010 – Sept 2017  
Tamil Nadu, India

**BTech**  
Electronics & Communication Engineering  
Jawaharlal Nehru Technological University  
Percentage : 77.3%

August 2005 – May 2009  
Telangana, India

## EXPERIENCE

**Samsung AI Center Toronto**  
Research Scientist

October 2020 – Present  
Toronto, Canada

**Samsung AI Center Toronto**  
Intern

March 2020 – August 2020  
Toronto, Canada

**York University**  
Postdoctoral Fellow  
Advised by Prof. Michael S. Brown

October 2017 – October 2020  
Toronto, Canada

## PUBLICATIONS

## RESEARCH WORK

### Overview – Postdoc

With the click of a button, we can capture an image. Concealed behind that click are a number of operations performed onboard the camera, collectively referred to as the in-camera imaging pipeline, that convert the linear raw-RGB image recorded by the sensor to the final nonlinear standard RGB (sRGB) output of the camera. Most computer vision tasks take the sRGB image which has been processed primarily for human perception as their starting point, and simply ignore the steps of the camera pipeline that produced it; this is sub-optimal. At the other end of the spectrum are computational photography approaches that entail a substantial redesign of the conventional imaging pipeline to make the camera's output better suited to solve the given computer vision task. However, such hardware modifications preclude the use of these techniques on off-the-shelf consumer cameras. My postdoctoral research has focused on carefully examining the various stages of the *existing camera pipeline* on present-day smartphone and DSLR cameras, and proposing practical mechanisms to simplify and improve the accuracy of various computer vision tasks either by tapping into the data generated by intermediate stages, or *minimally* modifying the existing pipeline.

### Overview – MS + PhD

Traditional algorithms designed for the tasks of face recognition, super-resolution, dynamic object segmentation and change detection typically assume that the camera is stationary *during* the exposure time of each image. However, given today's ubiquity of hand-held imaging devices such as mobile phones and point-and-shoot cameras, this condition is quite restrictive. We model the degradations that arise from relaxing the assumption of a static camera (motion blur in CCD and rolling shutter effect in CMOS sensors), and attempt to solve the above problems under the challenging scenario where the camera is unconstrained and free to move during exposure time.

## AWARD

- **Institute Research Scholar Award** for excellence in research awarded by IIT Madras in April 2017.
- **Best Paper Award**, 27th IS&T Color Imaging Conference (CIC27), October 2019.

## PROGRAMMING SKILLS

Matlab, MatConvNet, Python, PyTorch, Keras, C/C++

## PROFESSIONAL EXPERIENCE

Indian Institute of Technology Madras (July 2010 – September 2017)

### Coursework:

Computer Vision	Mathematical Methods and Algorithms for Signal Processing
Digital Signal Processing	Probability Foundations for Signal Processing
Image Signal Processing	Geometry and Photometry-based Computer Vision
Detection and Estimation Theory	Numerical Linear Algebra

### Teaching assistant:

Assisted in preparing and evaluating lab assignments and class tutorials for the following courses:

Networks and Systems  
Image Signal Processing  
Digital Signal Processing

Basic Electrical Engineering  
Introduction to Digital Signal Processing  
Advanced Topics in Digital Signal Processing
